

# Camera Link™ Splitter

## A simple solution for parallel image processing

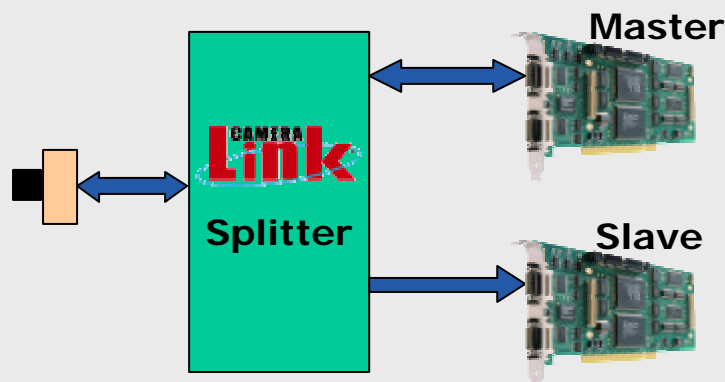

This module is designed to take as an input a single Base configuration Camera Link™ image and to output exactly the same image in two Camera Link bus. The Camera Link Splitter enable to run parallel image processing task with two or more PC allowing much higher speed processing.

Modules can be cascaded in order to transmit the image to more than 2 network PC.

The module can also be used as a camera Link repeater for distances over 10m.

## FEATURES

- Duplicate a Camera Link Image
- One Camera Link Base Input
- Two Camera Link base output
- Increase cable length
- Single 12V power supply
- Robust Industrial housing

 Full Camera Link bus including Frame Grabber in and out control signals, Image data and bi-directional serial interface

 Slave Camera Link bus including only Image data and control signal from the camera to the Frame Grabber
